

Mücahit Başaran

Computer Engineer / Software Developer

ABOUT

I am a Computer Engineer who graduated from the Computer Engineering department of Çankırı Karatekin University in 2026, focusing on software development and modern web technologies. I develop web applications, developer tools, and AI-driven projects using various technologies, primarily React, Next.js, TypeScript, and Python. My goal is to build, learn new technologies, and create scalable software solutions for real-world problems.

EDUCATION

Çankırı Karatekin University

Computer Engineering - Bachelor's Degree

2022 – 2026

Within the scope of my computer engineering education, I carried out academic and practical studies in fields such as software development, algorithms and data structures, web technologies, computer architecture, operating systems, databases, and artificial intelligence and machine learning.

Graduation Project: Car Sound Fault Detection

EXPERIENCE

Software Intern

Dijital Adam — Balıkesir

During my internship at Dijital Adam, I closely experienced professional software development processes and the stages of web-based application development.

- Contributed to the development and enhancement processes of web-based applications, improving the functionality and usability of user interfaces.
- Performed bug fixing, error detection, and development work by examining the existing codebase.
- Contributed to application development processes using modern web technologies and supported the improvement of existing features.
- Experienced teamwork, code reviews, and development processes in a real software development environment.

IT / Technical Support Intern

Çankırı Karatekin University — IT Department

Within the scope of my internship in the technical support section of the university's IT Department, I was involved in computer hardware, technical support, and system maintenance processes.

- Contributed to the detection and troubleshooting processes of hardware failures in computers and peripherals.
- Supported bringing systems into working order by performing installation, replacement, testing, and maintenance operations of hardware components.
- Analyzed technical issues encountered by users and executed appropriate solution and support processes.
- Contributed to more effective execution of troubleshooting and technical support processes by distinguishing between hardware and software-induced issues.

PROJECTS

AgentVerge

AI Agent Security & Verification Tool

AgentVerge is an open-source developer tool I developed aimed at the security, verification, evaluation, and regression testing processes of AI agents.

Within the scope of the project, I work on examining AI agent projects from a security perspective and evaluating them in a more controlled manner.

Technologies: Python, Pydantic, Typer, Pytest, Ruff

GitHub: <https://github.com/MBasaran4/agentverge>

HesapKitap

Web-Based Calculation Toolkit

HesapKitap is a frontend project where I combined various calculation tools that I previously developed as separate projects under a single modern web application.

The purpose of the project is to provide users with quick and clear access to different calculations they might need in daily life through a single platform.

Technologies: React, TypeScript, Vite, CSS, JavaScript

GitHub: <https://github.com/MBasaran4/HesapKitap>

Live Demo: <https://hesap-kitap.vercel.app/>

Car Sound Fault Detection

Graduation Project — Car Sound Fault Detection

Within the scope of my Computer Engineering graduation project, I developed an AI/machine learning-based system aimed at detecting potential mechanical faults by analyzing audio recordings taken from vehicles.

The main objective of the project is to reveal audio features that can be associated with specific fault types by analyzing variations in sounds coming from vehicle engines.

Fields: Python, Machine Learning, Audio Processing, Classification

TECHNICAL SKILLS

Programming: Python, JavaScript, TypeScript, C++

Web Development: React, Next.js, Node.js, HTML, CSS, Tailwind CSS, Vite

AI & Machine Learning: AI Agents, Machine Learning, Audio Classification, Data Processing

Developer Tools & Automation: Developer Tools, Automation, CI/CD, API Development

Tools & Platforms: Git, GitHub, VS Code, Vercel, npm

Other: Open Source, Web Development, Frontend Development
